

AMAN SAMANI

Full Stack Software Engineer | React • Next.js • Node.js
Lucknow, UP • +91-9794182694 • amanworkinfo@gmail.com • LinkedIn • GitHub

SUMMARY

Full Stack Software Engineer specializing in React, Next.js, Node.js, and database-driven applications. Strong in secure multi-tenant architecture, REST API design, background jobs, testing, CI/CD, and AI-integrated production features. Experienced in shipping reliable full-stack products with MongoDB, PostgreSQL, Redis, and cloud deployment.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, Java, SQL
Frontend	React.js, Next.js, React Native (Expo), HTML5, CSS3, Chart.js, responsive UI
Backend & APIs	Node.js, Express 5, FastAPI, REST API design, middleware, Zod validation, Helmet, rate-limiting
Databases & Jobs	MongoDB, PostgreSQL, Prisma, Redis, BullMQ, SQLite, schema design, background workers
Auth & Security	NextAuth v5, JWT, Google OAuth, RBAC, Playwright, Vitest, CI/CD, IDOR mitigation
Tools & Deployment	Git, GitHub, Vercel, Railway, Postman, Chrome Extensions (MV3), REST testing

PROJECT EXPERIENCE

Full Stack Developer | HireKarlo — AI ATS [Live] Independent Project
Next.js • TypeScript • PostgreSQL • Prisma

- Architected a multi-tenant data model using Organization, Membership, and TeamInvite entities with 4-tier RBAC (OWNER / ADMIN / RECRUITER / INTERVIEWER), enforced server-side via NextAuth v5 and Prisma.
- Found and fixed 2 cross-tenant IDOR vulnerabilities during a manual security audit of server actions, closing real data leaks between recruiter accounts.
- Integrated Google Calendar OAuth for interview scheduling with double-booking checks and .ics invites, backed by Playwright + Vitest and CI gating lint, type-check, and build on every push.

Full Stack Developer | Fitlip — Health & Nutrition App [App Release] Independent Project
React Native • Node.js • MongoDB • Redis

- Built and shipped 90+ REST endpoints across 10 route modules covering nutrition, health, workouts, tracking, auth, and social features on Express 5.
- Built a social fitness layer with friend duels, streak leaderboards, and achievements/XP, computing duel scores from daily logs at read time and persisting state only at resolution.
- Ran two decoupled BullMQ/Redis workers for weekly plan re-tuning and engagement notifications, with Helmet, rate-limiting, and CORS hardening.

PROJECTS

Rookie Agent — Local Developer Companion FastAPI • React • SQLite • Ollama

- Built a FastAPI backend with 23 modules and React/Vite dashboard with 10 views, exposing an MCP server with 11 tools for external AI clients to query agent memory.
- Built an isolated code-execution sandbox with stripped-secret subprocess environments, timeouts, and forced cleanup for safe LLM-generated code execution.
- Made ingestion crash-resistant by scrubbing secrets from clipboard data before persistence and syncing commits into SQLite individually.

Context Guard — LLM Context Monitor [GitHub] JavaScript • Chrome MV3 • DOM Parsing

- Built self-healing DOM parsers for ChatGPT, Claude, and Gemini with fallback Range-based ancestor traversal and selector-health diagnostics.
- Added optional OpenAI/Anthropic/Gemini extraction in the background worker so provider API keys never enter the host page execution context.
- Shipped as MV3 with minimal permissions, local-first snapshot storage, and JSON/Markdown export.

OPEN SOURCE CONTRIBUTIONS

Open Source Contributor | NotionNext — PR #4471 Aug 2026
React • JavaScript • Tailwind CSS • GitHub

- Contributed a merged PR to NotionNext improving the HEO theme's day/night mode toggle with an accessible sliding UI.
- Reused existing global theme state and persistence while adding semantic button behavior, ARIA attributes, keyboard focus styling, and reduced-motion support.

EDUCATION & LEADERSHIP

Babu Banarsi Das University, Lucknow Sept 2022 – June 2026
B.Tech in Computer Science GPA: 7.6 / 10.0

- Led a 4-member cross-functional capstone team; active LeetCode problem solver in Java with focus on DSA and dynamic programming.
